KIPCO Industries plc (UK) led by Samuel I.. A metodos cuantitativos para los negocios edicion 11 pdfQ: Fill a list with the first N objects that follow a condition, then list all other objects I'm pretty new to coding and have been struggling with this code for a while now. I am trying to create a list of the first N objects that follow a condition, then after that create a list of all other objects that follow that condition. The problem with the code below is that it keeps giving me errors and the output is not what i want it to be. The first list should look like the following: [[Object1,Object2,Object3,Object4,Object5,Object6,Object7,Object8,Object9,Object10,Object11,Object12,Object13,Object14,Object15,Object16,Object17,Object18]] And the list after should look like this: [[Object1,Object2,Object3,Object4,Object5,Object6,Object7,Object8,Object9,Object10,Object11,Object12,Object13,Object14,Object15,Object16,Object17,Object18]] [[Object2,Object3,Object4,Object5,Object6,Object7,Object8,Object9,Object10,Object11,Object12,Object13,Object14,Object15,Object16,Object17,Object18]] [[Object3,Object4,Object5,Object6,Object7,Object8,Object9,Object10,Object11,Object12,Object13,Object14,Object15,Object16,Object17,Object18]] [[Object4,Object5,Object6,Object7,Object8,Object9,Object10,Object11,Object12,Object13,Object14,Object15,Object16,Object17,Object18]] Following is the code that I have tried to do it using:

```
objects_to_follow = df1.group
```
